

Cftr-Flox(SD)

Gene Summary

Model Description

These strains carry loxP sites flanking exon6 of Cftr gene. When crossed with a Cre recombinase-expressing strain, this strain is useful in eliminating tissue-specific conditional expression of Cftr gene.

*Literature published using this strain should indicate: Cftr-Flox(SD) rats (Cat. NO. NR-CKO-233101) were purchased from Shanghai Model Organisms Center, Inc..
