

Pharmacodynamics Analysis & Evaluation

Based on the U-GEMM repository, the pharmacodynamics evaluation service from Shanghai Model Organisms can conduct main pharmacodynamics study on the drugs for anti-inflammatory-immunity, antineoplastic, cardiovascular system, respiratory system and metabolic diseases,etc, satisfy the study requirements of different layers of in vivo experiments, mechanism investigation and molecular biological study, and confirm the effectiveness and safety of new drug(s).

Based on the U-GEMM repository, the pharmacodynamics evaluation service from Shanghai Model Organisms can conduct main pharmacodynamics study on the drugs for anti-inflammatory-immunity, antineoplastic, cardiovascular system, respiratory system and metabolic diseases,etc, satisfy the study requirements of different layers of in vivo experiments, mechanism investigation and molecular biological study, and confirm the effectiveness and safety of new drug(s), to provide professional pharmacodynamics evaluation services for pharmaceutical enterprises, biomedical research institutes, new drug development centers, new drug R&D institutes of colleges and universities and other organizations home and overseas.
